

"The Assertion Of Unity"

"A Declaration Of Better!"

A stronger Unity — is our guiding principle; within self, and throughout America. Exercises now right given to men, from society, to better upon social neglects and government missteps, overlooked In the glories and powers of America's independence. This declaration is steadfast specifically to a united pathway of stronger human health, both physically and mentally, and unwavering. From the very beginnings of citizenship. Building reach and value beyond the ends of schooling, past ends of growth, and even evolving science.

Therefore, it is declared! That enough unity is there, of scientific foundations, evidence based facts, and proven structures of healthy guidance, that are available to better flourish and build greatness upon these guiding principles. And we declare these truths also self-evident, and deserving of equal government protections, and applications. We declare in this day our government destructive, neglecting, and ignorant; and not in unity with any minimal educational curriculum. To the ends of securing knowledge or education, for sustainable mental & physical health for citizens. And this declaration seeks to alter or institute a new evidence based, educational framework within guidelines. Which brings scientific foundations to it's judgements, and organizes its protections in a respectable, secured, and well proven formats; that are debated and resulting from consensus of scientific validations and representative importance. This is most likely to effect and provide for better health, safety, and longevity, plus a stronger unity.

Prudence indeed! is not to require changing established government otherwise. That provides sound representation, economic relief, and other proven securities. This document is rather to implementing plan directly focused over health and early developments. There is no body of government yet acceptable, regarding this fundamental need; or to which we are now accustomed. History holds evidence, to a long train of abuses, regarding physical and mental health of humanity. This attempts to reduce this abuse as a right, and a duty given by Americas Declaration Of Independence. To throw off such ignorance and provide new guidelines; for future securities, and flourishments towards a greater union of Peace. We observe that substandard health education, and diminished well-being, impede the progress toward a stronger union for its citizens, and more so future generations.

So in recognition of great need, is cause for this declaration: by severities overwhelming, with often lost success. Is why we choose this undertaking; to change direction towards a more unified society; in understandings of health, self-control, and preventions. We find it now self-evident that long term benefits of proactive, well regulated curriculum of focused health solutions early, is undeniable. We also understand tax payer burdens of reactive care, versus preventive well being. Yet we shall have some unified duty and responsibility to the youngest of citizenship, and those newly introduced to our society.

Therefore, we declare need for establishment of an "Assembly", of the people, by the people, and for the people, specifically dedicated to ensuring the educational and healthcare guidance; rightfully deserved by all members of our enduring union. This Assembly will be singularly focused on addressing the health needs of America's youth. These shall be entitlements, and

expressed here by list as cornerstones to guide this "Assembly"; in debating and creations of a more detailed and practicable curriculum framework. We hold that simply educating with guidance on making healthy choices, understanding nutrition, and learning self-care practices, is a scientific reality that offers healthier long-term sustainability and well-being. So Assembly will address these earliest needs within the entitlements below, and they will address adult needs separately, within the guidelines listed below as Pillars: Of Unified Considerations. "Assembly" shall debate and establish framework of adult guidance within these established Pillars of considerations.

This "Assembly" will establish a written body, regardless of immediate resources, to provide scientifically verified curriculum guidance to the earliest years; alongside recovery and reintegration support for adults. Prioritizing a healthy society with limited science-based, self-preservation education. This "Assembly" shall aim beyond basic survival, empowering individuals with knowledge and tools that foster independent contributions, for a healthier more able Union. This approach has proven highly economically efficient, ethically imperative, and socially beneficial. Assembly will convene to debate, establish guidelines, oversee implementation, and facilitate available resources. This Assembly shall guide its people through comprehensive education from early childhood to graduation, emphasizing the practical application of knowledge, health awareness, and safety; throughout a citizens younger, or otherwise necessary years. We assert that a well-protected nation has a right, a duty, and a responsibility to guarantee basic educational and healthcare provisions for its youth, and those left without support. The Assembly will be empowered to secure and provide for its people through legal frameworks, scientific understanding, reasoned judgment, and demonstrated needs.

"The Better Conclusion"

And so these Cornerstones Of Entitlement, followed by the Pillars Of Unified Considerations, are presented from a already unified scientific consensus of historical studies. They are also open to debates or adjustments from the Assembly appointed, by guiding regulations. and they are as follows;

First Cornerstone Of Entitlement:

Assembly shall support no regulation abridging the right of children to obtain a nutritious and adequate diet, without costs or growing debts. Healthy options shall be listed or offered primarily; along with information concerning, shall be provided for parental awareness and guidance.

The physical, emotional, and psychological health of youth shall not be impeded; and they shall be educated on the basics of healthcare, and psychological practices when appropriate for prosperity. Assembly shall guide the limitations of these entitlements, to the purposes of flourishing. And they shall set safety standards for schools, with reporting mechanisms and support services, for awareness, regulating, and preventions.

Second Cornerstone Of Entitlement:

Children possess the fundamental right to safety: and shall be protected from all forms of harm, abuse, neglect, and threats from bullying. This shall include unhealthy peer pressures proven to continually distract, or deny flourishing, prosperity, growth, or cause repression. While Assembly is to refine modern details to scientific standards, a mandatory reporting is required to higher authorities of law, anytime evidence or probable cause is realized. As to insure only reasonable investigation and age appropriate protections, without increased disruption to the child's well-being.

Third Cornerstone Of Entitlement:

Youth have the inherent right to real identity; including a name and nationality. And to maintain a connection with their parents, where it is in their best interest. They are entitled to engage, participate, and express their views, to be heard and respected, and to have their opinions considered seriously in interactions, consistent with their age and developmental stage. They shall be entitled to explanations over dismissals, and age appropriate involvement in decisions concerning their educational setting. And they are entitled to redress or revisit knowledge passed, if difficulty arises keeping pace. Assembly shall advocate tutoring or other supports if resources are available, to help prevent any left behind.

Fourth Cornerstone Of Entitlement:

All children have the right to a education curriculum of health and sustainability, both physically and mentally; to updated and evolved scientific standards. Assembly shall provide for basic framework and qualified educators. Children are entitled to learn, both of themselves and the greater environments of unity around them. The exploration of knowledge and the development of healthy skills shall be actively fostered, with a curriculum of evolving practices. Fundamental to this practice of sustained health and learning, are the entitlements to meaningful interactions, social connections, unstructured play, and adequate rest. These minimal efforts are integral to the growing body's continued development and progression, and should be regulated by Assembly for a curriculum most beneficial to its citizens.

And these entitlements shall be held for the youngest of Americans, up until legal adulthood, maturity, or the successful graduation of schooling, with understanding.

We also assert a separate guiding framework below, for the adult population of citizens not afforded unified care or healthy educations from Americas past. Some adult curriculum of healthy practices to those left behind or reintegrating, is equally deserving of this Assembly debate and frameworks of knowledge. We find this combined approach most beneficial over localized resolutions lacking wisdoms.

Therefore these Pillars Of Unified Considerations are guidelines set to support Assembly framework of practical healthy practices and examples

Pillar One - Of Unified Considerations:

A confidential, and most thorough assessment of health realities. Both physical and mental. Including basic skills assessment and educational awareness of Assembly body. Citizens are entitled to equal awareness of results to these limitations or potentials to better, from a unified perspective in the utmost of privacy.

Pillar Two - Of Unified Considerations:

The people of citizen have need for understandings at first, of their own languages or communications. Efforts should be to provide, foster, and attempt unified communications in native languages. Transitioning towards unified communications on health and prosperity, including culturally relevant norms, rights, and self-sustaining resources. Some limits of assimilation would be scientifically reasonable.

Pillar Three - Of Unified Considerations:

Education and practices should be to the resources of safe cover, especially in times of stress. To include healthy diets of weight, clean drinking water, and basic hygiene's of health. While often customized by elaborations, Assembly will guide minimal frameworks to these healthy needs by science, and not traditions. Also to establish general practices leading to other options from healthy earnings.

Pillar Four - Of Unified Considerations:

The people are deserving of a unified collaboration of curriculum, by scientific standards and examples of practice, to both a physical direction of well-being, along with separately that of mental health and understanding. Assembly shall set those guides for its union. Exemplifying minimal pathways and regulating frameworks, that provides this education to it's citizens, for thoughtful considerations and applications; regardless of resources. And this shall be it's responsibility for a healthier, and more prosperous America.

"Forwarding The Fruition; By Assembly"

Therefore, the guidelines deemed necessary for creation and expansions of this "Assembly" are listed below by Provisions; necessary for implementation and protections of its specific nature and focus. These Provisions are as following:

Provision One: Scope Of Review:

Focus of this Assembly needs be very narrow, and to the health needs of citizens equally. Yet the scope of review can be quite extensive. It is duty of this Assembly to seek debates far and wide, to the specific goals of human health, and well-being. Resolution is finding equally the most minimal of prosperous functions, along side reasonable expectations that might complicate, confuse, repress, or deny acceptance of often nominal and natural facts that could be available, but are confused by other ages in need. Scope is to the details to every age of need. For recordings of healthy curriculum.

This is not a scope over traditions, theories, customs, or studies difficult to reprove or verify individually. Arguments are not to maybes, likely, or possibilities, of perceived benefits from uncertainties. The scope of this Assembly review is not to guesswork. Aim is not yet to a full body of understanding health, throughout all diversities and stages. Rather scope of review shall be to greatest health needs of American citizens in basic flourishments. Scope is not about attainments of joys or prosperities, rather it is strictly to the records about avoiding sufferings from the lack of healthy knowledge. This is far different through many ages of young and adult lives. Hydration needs alone, vary far different scientifically between ages, and weights. And Assembly is challenged to each, for record to its healthiest curriculum; in a narrow scope of informed functionality awareness of best practices proven; over temptations, urges, or misguided information, that may lead ignorance astray. A citizens access to records of healthy practice; specific to years coming, relative to years of age, would be invaluable to health of a strong unity. If such scope of review truly keeps the people's interests a priority, and grounded steady in scientific testing and practices. And those applications, could evolve even better knowledge, then would today's ignorance.

Provision Two: Procedure & Records:

The limited scope of Assembly focus to growing health concerns, leaves a vast record to establish that has not been unified yet; by debate, body, or practicality to consistent benefits. Different ages and sizes require unique understandings and considerations for optimal health. A library established in today's technology, consistent with citizens' growing needs, and to their healthiest interests, would be invaluable for independence to embrace. From even any age, or ignorance to health or unified prosperity. Therefore, Assembly holds great task in creating this focused record of age appropriate curriculum, from wide diversities throughout history. And they shall be deemed most beneficial to the citizens of that age.

And they will use a unified consensus of science, gathered from well planned debates and considerations. Using well proven evidences easily found by testing. Culminating into plans of action and healthy fulfillments into a written library of records. A large body of members is helpful to understanding all the mistakes and misunderstandings that have easily been made in ignorance growing up. To help assembly body now, make record clear to the right, proven, and healthier options specifically to the years coming from age.

And this body of record might be quite large, as law would seem to life in any one day. Yet it could prove more valuable to you, in many far reaching, and internal ways. And it can be confusing, trying to contemplate all ways to best capture the needed values for many perceptions. Yet assembly will have heart for this challenge, and begin debates to establish procedures best fitting for accomplishments. And changing them as need. A simple majority vote, or flips in tie, should be enough to begin procedures and progressions to establishing a lasting record.

This is a fact finding endeavor. The greatest evidence wins recommendations on the written record. Any vote from all members, is only to consider opposing positions, for any facts overlooked. Upper Assembly will hold votes over procedures presented by any Assembly; yet any votes otherwise are more to the avoidance of missing facts, then any say over disregarding them. It is priority of this body to the health of its citizens, over any votes to dictate such.

Provision Three; Membership & Registration:

Assembly shall have two designations. One to the Upper Assembly, and the Other is to the Lower Assembly.

Upper Assembly shall consist of only parents of more then 18 years with one child. There is no limit to how many members can participate in this Upper Assembly, yet they must be an American citizen and have raised one child in America for over ten years. This Upper Assembly shall have deciding vote over implementing committees, and processes of regulating efficiency.

The Lower Assembly is also not limited by numbers, or residency. Anyone with desired interest or thoughtful insights is invited to join this Assembly for better health and understanding. Registration will be required to participate in debates, and you may be required to explain your vote for it to be reasonably considered. It is goal of Assembly to uncover evidence based scientific curriculum most age appropriate, holding true vote is for that, over unclear opinions. Registration is encouraged for witness to knowledge, if even participation is minimal.

Provision Four; Changes, Alterations & Amendments:

This understanding could not be possible without the protections and dedications of our United States Constitution, that includes its Declaration Of Independence. Asserting in all their beauties, that they also lack protections of unified curriculum to healthy and sustainable ways, within even their struggles to begin. This document seeks to fill that gap, for a more healthy and better union. This assertion is designed to complement or evolve those great documents to a greater whole, or healthier Unity. Therefore, except for the specifics noted here by cornerstones, pillars, and provisions, for the limits of this purpose; any amendments, changes, or alterations to this document, shall be obtainable by interpreting reasonably methods and way, from the detailed records of procedures used to amend those documents. As a general guide for new procedures also if deemed necessary

Provision Five: Seed Of GrandPapers:

This Assertion is designed specifically to fill a gap, in the already established super empowerment of America. It is intended to grow a most valuable need currently lacking in the structure grown from independence. It is a void that doesn't seem to find understanding in a diverse yet strong unity. Designed as a living document, it is not protected to stand on its own with detailed articles, and provisions of powers, like it's fathering papers. It is meant more to just fit in, under greater well proven protections. And for the people, it first needs their unified support, before any authority or power can allow it to fill the vacancy it is designed for. And a full body of regulation and securities are inherently available within those grand papers.

This isn't meant to make a difference of anything already established, except the wisdoms and understanding from its people, to its people. I myself am product of this ignorance, using AI to recognize and compile facts easy and often overlooked. And furthering this is only possible from the documents inspiring this one; yet lacking this critical seed. While still holding the same care for its people, many even giving their lives for it. It is now honor! to declare better for it. And provide a reasonable path of growth to it. For all of its people, and for its grand papers. It is not meant to stand alone, rather it is seed designed well to grow within the grandeur of its Fathering documents. Those being of America's foundation. And blessings sought, is truly for its Gods, and their greater wisdoms to health.

It is dream of this Author that such seed flourishes well throughout the framework and giving's of such an admirable determination. And for all its perceived shortcomings, little is still found by law. Worthy of admiration by process alone, it is hoped that this small seed of Assertion will eventually produce small buds of interest and hope, growing in all its evolutions and discoveries; that really lead to a flowering of knowledge unimaginable from the lives and future that comes from it. A bed of roses if you will, for the independence our forefathers so heroically laid down their lives for. We can now effort to that in peace, for knowledge, and by Assembly. To a healthier and better... **Unity!** without... End.
